

In a society where changes quickly transform the way we live, relate, communicate, and elaborate a thought, it is here that the old gives way to the new. For thousands of years man has always unknowingly used a branch of science, nanotechnology. A science that follows laws and characteristics that are different from those we are normally used to, different from those appreciable by our senses.

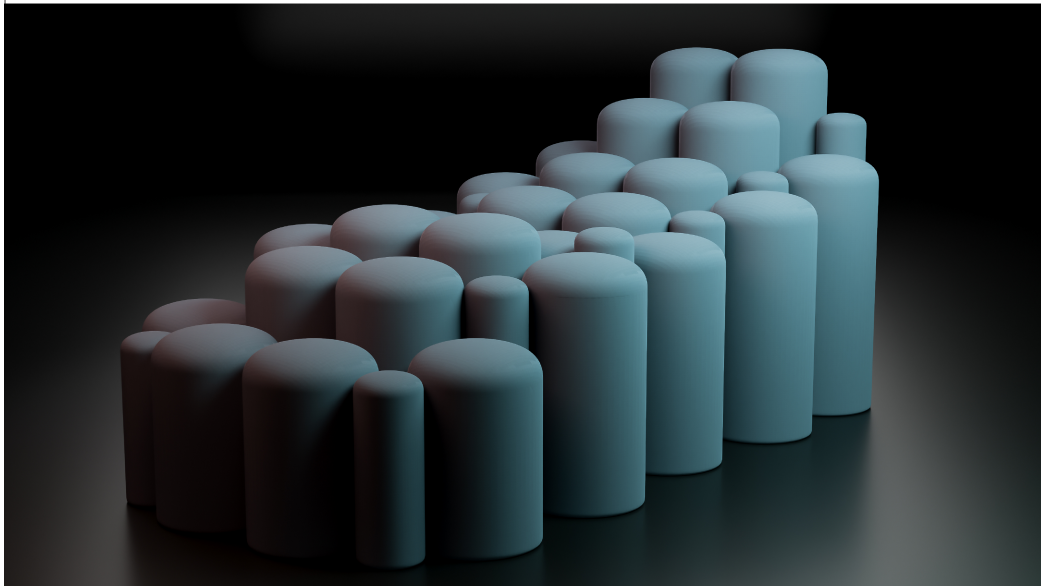

In nanotechnology every process does not depend on the properties of the individual molecules but on those of the atomic complexes taken as a whole. "Atoms are the new bits", as Chris Anderson defines the next Industrial Revolution; an age of open source, do-it-yourself, bespoke product design, all it takes to conquer the world is a brilliant idea.

From this concept was born "Leisure", a work of cohesion between the individual elements, where we can reappropriate our time.

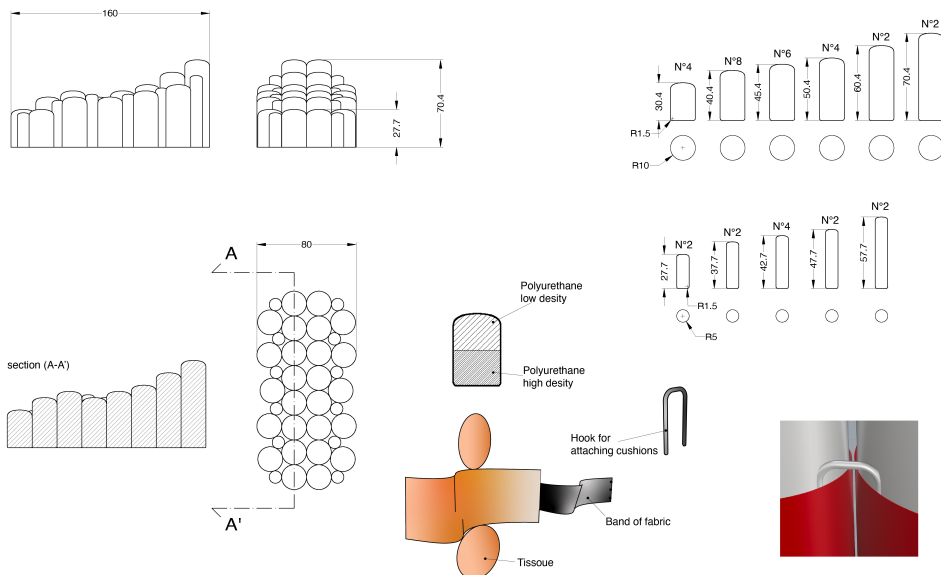

Leisure is made up of 40 cylinders of different diameters and heights made in polyurethane foam of two densities to give rigidity and comfort at the same time. Covered in fabric, they are held by a hook inserted into a loop band. Completely customisable, Leisure adapts to your needs with the possibility of moving the cylinders to your liking.

POLIARTE Design, Ancona | Indirizzo Product design 2022.23 | Corso di DESIGN II, Progettazione | Nome | Cognome | Città | Data | Progetto | Titolo
Accademia di BelleArti | primo semestre | arch.Sebastiano Cecarini | Ennio | Sproccati | Termoli (CB) | 31.01.2023 | Whose time? | Leisure
